

B.TECH IT - MIT MANIPAL

Shubham

Sethia

Full-stack engineer who builds things that work. From encrypted messaging to AI-powered tools — I care about clean code and products people actually use.

01 About Me

I'm a third-year Information Technology student at Manipal Institute of Technology, building a strong foundation across the full stack — from system architecture and REST APIs to responsive frontends and mobile apps.

I enjoy working on problems that require both precision and creativity: designing a secure encryption pipeline, structuring a clean database schema, or making a UI that feels natural to use. I'm equally comfortable diving deep

01 About Me

I'm a third-year Information Technology student at Manipal Institute of Technology, building a strong foundation across the full stack — from system architecture and REST APIs to responsive frontends and mobile apps.

I enjoy working on problems that require both precision and creativity: designing a secure encryption pipeline, structuring a clean database schema, or making a UI that feels natural to use. I'm equally comfortable diving deep into backend logic or polishing front-end details.

Outside coursework I'm an active Managing Committee Member of the IEEE Student Branch at MIT Manipal — I led the "Retro Web Reboot" event for 100+ participants and contribute to technical workshops and competitions each semester.

INTERESTS

- Systems Design
- Cybersecurity
- Machine Learning
- Mobile Development
- Algorithms & DSA
- Open Source

02 Skills & Stack

LANGUAGES

- Java
- JavaScript
- Python
- C++
- SQL

WEB & FRAMEWORKS

- ReactJS
- Node.js / Express
- React Native
- HTML5 & CSS3
- Tailwind CSS
- PHP

DATABASES & TOOLS

- MySQL
- MongoDB
- SQLite / Prisma
- Git & GitHub
- REST APIs

CS FUNDAMENTALS

- Data Structures & Algorithms
- Object-Oriented Programming
- Operating Systems
- Database Management
- Software Engineering

03

Projects

Crypt-Talk

ACTIVE

01

Flask · React · MongoDB · Socket.IO · Cryptography

Secure real-time communication platform with a 7-layer proprietary encryption pipeline. Upgrades standard E2EE to require independent compromise of all 7 cryptographic layers, making interception practically infeasible.

→ Perfect Forward Secrecy with one ephemeral key per message

→ Metadata concealment via steganography, block permutation & noise embedding

→ Traffic-analysis resistance — communication existence is hidden from observers

Github

→

ResumeRX

COMPLETED

03

React · Vite · Node.js · MongoDB · Stripe · AI APIs

AI-powered resume builder with a multi-provider AI abstraction layer supporting Ollama, OpenAI, Anthropic, and Gemini. Full payment integration via Stripe with webhook lifecycle management.

→ Backend: auth middleware, resume CRUD, AI proxy, Stripe payment lifecycle

→ Single unified AI interface switching between 4 providers

→ Group project, primary backend contributor (Section F, Group 6)

Github

→

Health Care — Hospital Management System

COMPLETED

04

PHP · MySQL · JavaScript · HTML/CSS

Centralized hospital management platform serving administrators, doctors, and patients. Covers appointment scheduling, billing, and medical records with multi-stakeholder requirement analysis.

→ 80% reduction in manual administrative workflows

→ 50% improvement in data access speed post-deployment

→ Modular design supporting three independent stakeholder roles

Github
